

Laravel Developer Assignment: Dynamic Quiz System

Objective

Build a flexible Quiz System that supports multiple question types, media, and evaluation logic. This assignment evaluates Laravel fundamentals, data modeling, extensibility, code quality, and structured use of AI tools.

Technical Requirements

- 1 Framework: Laravel (latest stable version)
- 2 Database: MySQL or SQLite
- 3 Frontend: Blade or simple JavaScript
- 4 Storage: Local storage for media
- 5 Authentication is not required

Core Features

Quiz Creation

- 1 Create quiz with title and description

Question Types

- 1 Binary (Yes/No or True/False)
- 2 Single Choice (one correct option)
- 3 Multiple Choice (multiple correct options)
- 4 Number Input
- 5 Text Input

Question Editor

- 1 Support rich text or HTML
- 2 Support image upload
- 3 Support video URL (e.g., YouTube)

Options Handling

- 1 Options can be text, image, or both

Quiz Attempt

- 1 User can attempt quiz
- 2 Answer all question types
- 3 Submit quiz

Evaluation Logic

- 1 Each question has marks (default 1)
- 2 Calculate total score
- 3 Display result after submission

Suggested Database Structure

- 1 quizzes
- 2 questions
- 3 options
- 4 attempts
- 5 answers

Constraints

- 1 All question types must be supported
- 2 System should be extensible for future types
- 3 Avoid hardcoded logic for each type in multiple places

Deliverables

- 1 Working application with all required features
- 2 README.md with setup instructions
- 3 ARCHITECTURE.md explaining design decisions and extensibility
- 4 AI_USAGE.md detailing AI usage, prompts, and corrections

Timeline Expectation

Instead of a fixed deadline, you are required to provide your own estimated timeline to complete this assignment. Include a brief explanation of how you arrived at this estimate and how you would plan the work.

Evaluation Criteria

- 1 Functionality: 25%

- 2 Data modeling and extensibility: 25%
- 3 Code structure and clarity: 15%
- 4 Evaluation logic correctness: 10%
- 5 Architecture explanation quality: 15%
- 6 AI usage depth and clarity: 10%

Rejection Criteria

- 1 Missing any required question type
- 2 Hardcoded or non-extensible logic
- 3 Broken or incorrect evaluation
- 4 Missing architecture or AI usage documentation
- 5 Inability to explain implementation
